

CLEANING & CARE **POLYPROPYLENE TABLES**

- Wash plastic surfaces with warm water and colourless, non-abrasive liquid detergents
- Leave the soapy solution for a few minutes and then, if necessary, scrub the surface with a flexible bristle brush.
- Subsequently rinse thoroughly with water and dry with a soft cloth
- Avoid prolonged contact with coloured or fatty substances, because they can be absorbed by the polymer and leave stains
- If using water pressure systems for cleaning, be aware not to damage the surface.
- Abrasive cleaners that may affect the product must not be used
